

## **GENERAL SIR JOHN KOTELAWALA DEFENCE UNIVERSITY**

Faculty of Engineering  
Department of Mathematics

BSc Engineering Degree  
Semester 4 Examination – Nov/Dec 2018  
(Intake 34 – ACM/AE/BM/CE/EE/ET/ME/MR/MT)

### **MA 2211 – APPLIED STATISTICS**

Time allowed: 1 hour

28<sup>th</sup> November, 2018

#### **ADDITIONAL MATERIAL PROVIDED**

Statistical tables are provided

#### **INSTRUCTIONS TO CANDIDATES**

This paper contains 3 questions on 4 pages

Answer all questions

This is a closed book examination

This examination accounts for 70% of the module assessment. A total maximum mark obtainable is 100. The marks assigned for each question and parts thereof are indicated in square brackets

If you have any doubt as to the interpretation of the wordings of a question, make your own decision, but clearly state it on the script

Assume reasonable values for any data not given in or provided with the question paper, clearly make such assumptions made in the script

All examinations are conducted under the rules and regulations of the KDU

$$r = \frac{n \sum (xy) - (\sum x)(\sum y)}{\sqrt{[n \sum (x^2) - (\sum x)^2][n \sum (y^2) - (\sum y)^2]}}$$

$$\hat{y} = bx + a ; \quad b = \frac{n(\sum xy) - (\sum x)(\sum y)}{n(\sum x^2) - (\sum x)^2} , \quad a = \frac{\sum y}{n} - b \frac{\sum x}{n}$$

### Question 1

- (a) Assume heights of women in a population follow the normal distribution with mean 64.3 in. and standard deviation 2.6 in.
- (i) What percentage of women have heights between 60 and 66 in.?
  - (ii) A woman is chosen at random from this population. What is the probability that she is more than 67 in. tall?
  - (iii) If 100 women are randomly selected from this population, approximately how many of them are more than 67 in. tall?

[3×5=15 marks]

- (b) In a random sample of 85 automobile engine crankshaft bearings, 10 have a surface finish that is rougher than the specifications allow. Therefore, a point estimate of the proportion of bearings in the population that exceeds the roughness specification is  $\hat{p} = x/n = 10/85 = 0.12$ . Find a 95% confidence interval for the population proportion  $P$ .

[20 marks]

### Question 2

- (a) The data in the following table represent the monthly sales and the promotional expenses for a store that specializes in sportswear for young women.

Month	1	2	3	4	5	6
Sales (in \$1,000)	62.4	68.5	70.2	79.6	80.1	88.7
Promotional expenses (in \$1,000)	3.9	4.8	5.5	6.0	6.8	7.7

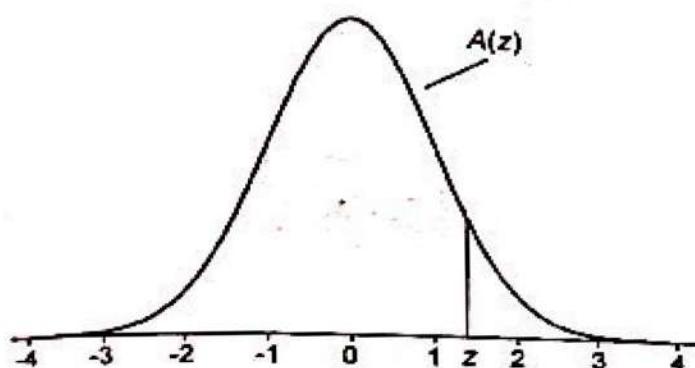

- (i) Calculate the coefficient of correlation between monthly sales and promotional expenses. [10 marks]
- (ii) Find an equation of the linear regression line. [10 marks]
- (iii) Estimate the promotional expenses to bear if monthly sales is 75 thousand dollars. [5 marks]

### **Question 3**

- (a) In the past, a machine has produced washers having a thickness of 0.050 in. To determine whether the machine is in proper working order, a sample of 10 washers is chosen, for which the mean thickness is 0.053 in. and the standard deviation is 0.003 in. Test the hypothesis that the machine is in proper working order, using significance level of 0.05. [20 marks]
- (b) An examination was given to two classes consisting of 40 and 50 students, respectively. In the first class the mean grade was 74 with a standard deviation of 8, while in the second class the mean grade was 78 with a standard deviation of 7. Is there a significant difference between the performance of the two classes at the 0.05 significance level? [20 marks]

-----End of the question paper-----

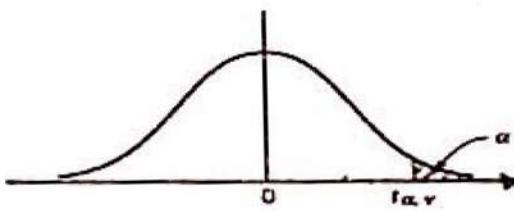

## Cumulative Standardized Normal Distribution

$A(z)$  is the integral of the standardized normal distribution from  $-\infty$  to  $z$  (in other words, the area under the curve to the left of  $z$ ). It gives the probability of a normal random variable not being more than  $z$  standard deviations above its mean. Values of  $z$  of particular importance:

$z$	$A(z)$	
1.645	0.9500	Lower limit of right 5% tail
1.960	0.9750	Lower limit of right 2.5% tail
2.326	0.9900	Lower limit of right 1% tail
2.576	0.9950	Lower limit of right 0.5% tail
3.090	0.9990	Lower limit of right 0.1% tail
3.291	0.9995	Lower limit of right 0.05% tail

$z$	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09
0.0	0.5000	0.5040	0.5080	0.5120	0.5160	0.5199	0.5239	0.5279	0.5319	0.5359
